

Brief

Pathfinder is a strategy studio that works with early stage startup founders in high stakes situations and maps their 0 to 1 journey. In these scenarios our people show up with curiosity and creativity, bring in rigor to their craft and build alignment with the founders.

We are looking for our first full stack developer who will work with us on two fronts:

1. Build our platform which becomes our medium to interface with our customers.
2. Build our AI centric product that will partner with us in our preparatory work for discussions with customers.

Assessment

Our website - <https://www.pathfinder.build/>

Currently our Resources tab has not been built. We are looking to populate the Library/Resources with - our concepts and mental models and also some of our research work on the industry.

Please create a page for Resources tab which implements the following aspects:

Backend

- Think of basic functionality on modules like - uploading content (CRUD operations)
- RBAC for the admin and social media manager
- Configuration for different content types:
 - Concept notes
 - Public handbooks
 - Our inspirations (people)
 - Testimonials

Frontend

- If it is in line with our existing design language and navigation
- It should be functional – such that the links on the page should take you to a detailed page that provides you with an overview of the content. There could also be a downloadable resource.

Tips

- You could use Lorem Ipsum for the content.
- Build a simple workflow flow for different user personas – admin, content team, visitor
- Build templates for a few standard representations of the content.
- Make sure you invest sometime on the graphics and page responsiveness to make it visually pleasing
- See if you can implement a lazy loading.
- Try to have the top right nav bar implemented as per our current website
- If you need access to any of the design files, just ask.
- There is no PRD on purpose.
- You can assess if the task is too much and revert accordingly.

Evaluation Criteria

You will be evaluated on the following aspects

1. The functionality – the depth of thinking that has gone into defining the functionality
2. Attention to detail in terms of the flow and functionality. .
3. Page responsiveness towards different screen sizes and devices.
4. The ability to articulate the choices made and why they were made

Guidelines

1. Please do not share LLM generated substandard work.
2. Please create a Github repo and a working URL for the page you create.
3. Please submit the assessment on time.
